Welcome to Fedco's 25th offering of flowerbulbs and seed garlic.

We list over 250 selections of bulbs and plants this year, including over two dozen early shipment items (E1011-E1253) which need early planting here in the North and which will ship in early September. Our main delivery will begin just before the Common Ground Fair (Sept. 25-27) and will run nearly two weeks. We will host our annual pickup and surplus sale at the warehouse in Clinton on Wednesday, October 14th, 10am-4pm.

At last year's CGF, we had a workshop to develop relationships with growers for seed stock for Fedco. This year we offer 12 Maine-grown varieties including 3 seed garlics, 3 narcissus, 3 flowering allium, Susan's Siberian Iris, 'The Giant' Colchicum and the peony 'Duchesse de Nemours'. Order early because supply is usually limited. If we sell out of the local supply, we will substitute stock from our other suppliers, if still available.

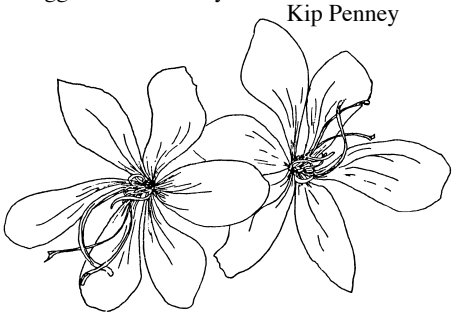
Look for **NEW!** items this year among the indoor amaryllis and paperwhites, and the outdoorsy daylilies, crocuses, narcissus, lilies and tulips. We've brought **BACK!** varieties we've sold in prior years which have become available again, among them the above-mentioned locally grown narcissus.

Our high-quality bulbs are farm-grown or nursery-propagated from commercial stock, and unlike many other suppliers' offerings, nearly all are topsize. Larger bulbs result in larger flowers and more vigorous plants. When you compare our prices with stores and other catalogs, please remember to factor in bulb sizes, shipping costs and our volume discounts.

Fedco bulbs is a division of Fedco Seeds Inc, a consumer/worker cooperative. Please let us know if you'd like our other catalogs. (Trees in October; Seeds, supplies and seed potatoes in December.)

Write to us with your questions, comments and suggestions. Thank you.

Kip Penney



Please save this catalog, as we send only one per year. General planting instructions and a chart showing specific depths and spacing are on page 6. Other plant requirements are given in the descriptions and on our website so you can plan your plantings before you receive your order.

Seed Garlic

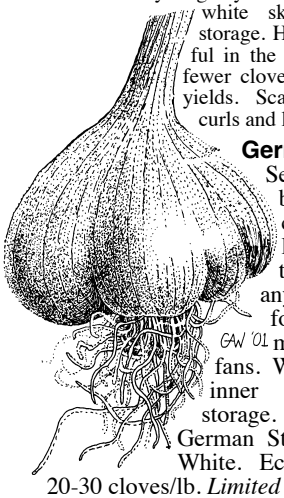
Allium sativum subs. *ophioscorodon* - All the garlic varieties this year are hardneck types, which are hardy for our cold New England winters. These hardnecks have greater depth of real garlic flavor than the softnecks typical of Gilroy. Though the stiff neck makes them unsuitable for braiding, they can be tied and hung in attractive bundles. Harvest scapes by mid-July to add to salads. Topset bulbils can be used for replanting or for cooking. Z3-8.

Growing Great Garlic by Ron L. Engeland, 213 pages, 6x9, softcover. If garlic is your passion, or even just your avocation, you'll enjoy this book. Engeland, an expert who successfully grew and sold over 100 strains, has written the definitive guide to growing garlic. He devotes 30 pages to varietal differences, adds a fascinating chapter on history, and provides in-depth cultural information on growing, harvesting, storing and marketing garlic.

2211: $17.50

Porcelain-type Garlic varieties

Produce 4-6 very large symmetrical cloves with tight white skins making excellent storage. Huge cloves are wonderful in the kitchen, but also mean fewer cloves per pound and lower yields. Scapes form arches and curls and loose coils.



German Extra-Hardy - Selected for size. Big bulbs yield 4-6 huge cloves, each equivalent to about two or three cloves of nearly any other garlic. Perfect for production pesto-making or avid garlic fans. White outer skin, red inner covering. Excellent storage. May be the same as German Stiffneck and German White. Eco-Grown in Maine. 20-30 cloves/lb. *Limited supply*.

2221: 3 bulbs for $9.50

Music - **Organic** - Similar to German Extra Hardy, with large succulent cloves, usually 4-5 per bulb. Our supply comes from Wellspring Farm in central New York state, where folks have been growing NOFA-certified organic since 1991 and are founding members of the Garlic Seed Foundation. 20-30 cloves/lb.

2231: 3 bulbs for $10.00 2232: 2# for $35.00
2233: 5# for $69.00 2234: 20# for $195.00

Rocambole-type Garlic varieties

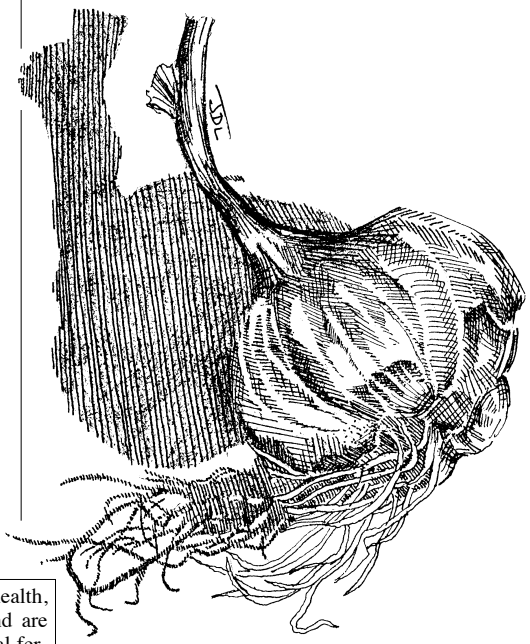
Produce 6-12 large cloves with tan, brown or reddish loose skins which are very easily peeled. Slightly shorter shelf life due to loose skins. Generally, stores easily until February, and if cured well, can store months longer. Scapes form tight coils.

Phillips - **Organic** - Molly Thorkildsen and Will Bonsall obtained this vigorous Rocambole from Raymond Rowe of Phillips, ME. Each bulb contains 6-8 large cloves with a milder flavor than Russian Red. The tan exterior skins and purple mottled clove coverings are substantial, making this an excellent keeper. We've had reports of bulbs keeping more than a year. Slow to emerge in spring, so don't be alarmed when these take an extra two weeks to appear. They catch up quickly and mature at the same time as the other varieties we offer. MOFGA-certified organic. 40-50 cloves/lb. 1# yields approximately 6#. *Limited supply*.

2241: 3 bulbs for $9.50

Russian Red - **Organic** - Named for its mottled burgundy skin, said to have been brought to the Pacific Northwest by Russian immigrants in the early 1900s. Forms a ring of 5-8 large plump cloves around a central stalk. Keeps well for over six months. MOFGA-certified organic. 50-60 cloves/lb. 1# yields approximately 6#.

2251: 3 bulbs for $9.50 2252: 2# for $33.00
2253: 5# for $65.00 2254: 20# for $190.00



Eco-Grown - Grown *with* inputs that promote soil health, keep toxins out of our food and the environment, and are oriented towards sustainability. Grown *without* chemical fertilizers or pesticides, but not certified as organically grown.

How to Grow Garlic

Prepare a well-groomed seedbed of rich compost or composted manure. Break the bulb into individual cloves.

Plant cloves 5-6" deep and 4-6" apart, mid to late October. (Time frames are for central Maine, Zone 4.)

Mulch with 4-6" of hay, leaves or straw.

❄❄❄❄❄❄❄❄❄❄❄❄❄❄❄❄

In spring, pull back mulch from around the emerging garlic tips.

Top dress or foliar feed, and provide adequate moisture during the growing season to encourage the formation of larger bulbs.

Cut off the flower stalks, known as scapes, as they curl around; eat them green, compost them, or dry them for winter arrangements. If you leave the stalks on, the underground bulbs may be smaller. You can harvest the top-set bulbils to plant in fall for fresh greens next spring or bulbs in two years.

Poke around a few garlic bulbs in early August to check growth. Pull when 5-6 green leaves remain, before cloves begin to separate. Cure in a shaded airy place, 60˚-70˚, until dry. Do not field-cure.

Trim, clean, store in a cool dry place and enjoy through the winter.

We guarantee the quality of our bulbs, and warrant that all items we offer are fully satisfactory. If you are dissatisfied for any reason, we will replace the item or refund the purchase price.

Please inspect your order upon receipt and use the correction sheet to notify us immediately of any problems. If you notice problems next spring, let us know immediately. Claims for any defects in Fedco's products should be presented to Fedco as soon as possible after discovery. Failure to assert claims within 30 days after discovery renders this warranty null and void.

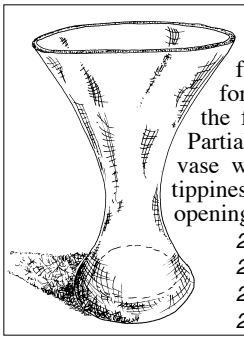
Indoor Bulbs

lift our color-deprived spirits during long northern winters. More satisfying than cut flowers because we can watch as the foliage grows. Enjoy the anticipation as the flower buds form, swell and finally burst open.

Many people stagger their indoor plantings to prolong the season. If you don't plant the bulbs right away, keep them dry and store in a cool dark place.

Amaryllis - *Hippeastrum* - grows outdoors in Zones 9-10 and originates from Central and South America. Those of us in colder climes can plant these magnificent hybrid beauties indoors and enjoy blooms throughout the winter. Remove the pollen-bearing anthers for a longer bloom time and a neater tabletop. Easy to grow, they will return year after year with simple care.

Brazilian amaryllis are harvested nearly a month before those from Holland. Therefore, they tend to bloom before the early winter holidays, while Dutch amaryllis flower in mid-late winter. To help you plan a continuous winter floral display, all the Brazilian amaryllis are clearly marked. Note that they are also a size smaller and therefore less expensive.



Amaryllis Vase

Clear glass with gracefully curving hourglass form allows you to observe the full growth of the plant. Partially fill the bottom of the vase with pebbles to ward off tippiness. 6" diameter top opening, 4¾" base, 9¾" tall.

2262: 2 for $31.00
2263: 3 for $44.00

➢ **JUMBO AMARYLLIS** - Jumbo bulbs produce 2 or more stalks bearing 3-5 blooms per stem. 20-25" tall, 30-32cm, except where noted.

'Apple Blossom' - A classically graceful beauty, white, lightly brushed with streaks of pink. Grown in Brazil. 28/30cm.

"I have never been so wowed by my two amaryllis as I am this year!!…They each have 3 flower stems! 4 flowers on the first stem and 2 on each of the other 2."
Jefferson, Maine 2/28/08

Plant Amaryllis between October and May for flowering between December and June

If you do not plant your bulb immediately, store it in a cool area (50°F.)

Before planting, place the bulb and its dangling roots in lukewarm water for several hours. Plant in a pot slightly larger than the diameter of the bulb. Rocks added to the bottom of the pot will decrease tippiness and improve drainage. Cover the bulb to the neck with nutritious potting soil or compost. Press the soil firmly around the bulb. Don't overfill the pot; leave enough room for watering.

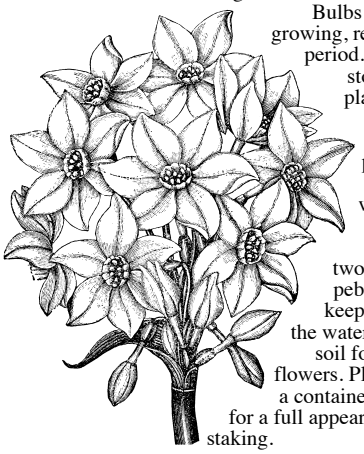
In the first few weeks, water sparingly. After the leaves and bud develop, water more frequently. Direct sunlight and warm temperatures encourage proper growth. Lower light and temperature results in taller stems, whereas greater light and temperature promotes shorter stems. Amaryllis generally bloom 6 to 8 weeks after planting; the flowers last about 2 weeks.

Cut the stem close to the bulb after the flower fades. The long thin leaves will continue to grow. Once the weather warms up, the plant can be moved outdoors. In mid to late summer, stop watering and let the leaves die back. Before first frost, bring the pot back inside and place in a cool dark place for 8 to 12 weeks to simulate dormancy.

Bring the bulb back to room temperature, resume watering, and its flowering cycle will begin again.

Paperwhites or **Indoor Narcissus** - *Narcissus tazetta* -

Tall slender stems bear highly fragrant masses of delicate flowers. Must be grown indoors in Zones 1-6. Bulbs arrive ready for growing, requiring no cold period. The longer you store bulbs before planting, the more quickly they bloom. October plantings bloom in four to six weeks; February plantings may take as little as two weeks. Plant in pebbles or marbles, keeping bulbs above the waterline, or plant in soil for longer-lasting flowers. Plant 5-8 bulbs in a container 6" in diameter for a full appearance. May need staking.



'Chinese Sacred Lily' - *N. t.* var. *orientalis* - White petals with a yellow cup. Takes longer to root than other varieties and has fewer flowers, but its wonderful sweet fragrance is worth it. Very popular in Victorian England, whence its misnomer comes. 16-20". 15-16cm.

2351: 5 for $5.75 *2352: 10 for $9.50*
2353: 25 for $22.00 *2354: 100 for $75.00*

'Constantinople' - Highly doubled form of 'Chinese Sacred Lily', with clusters of pure white petals and very ruffled golden to orange cups. 'Double Narcissus of Constantinople' was listed in *Twelve Months of Flowers* by Robert Furber in 1730. Fragrant. 12-14", 15-16 cm. **NEW!**

2361: 5 for $5.75 *2362: 10 for $9.50*
2363: 25 for $22.00 *2364: 100 for $76.00*

'Grand Soleil d'Or' - Heirloom French variety with medium golden-yellow petals and orange cup. Light fruity scent. Takes a couple of weeks longer than 'Ziva' to bloom, about 4-6 weeks. 12-14". 15-16cm.

2371: 5 for $5.75 *2372: 10 for $9.50*
2373: 25 for $22.00 *2374: 100 for $75.00*

www.fedcoseeds.com/bulbs.htm

2383: 25 for $22.00 *2384: 100 for $76.00*

'Ziva' - Early paperwhite, one of the fastest to force (about 2 weeks) and the most floriferous. White flowers with strong musky spicy fragrance. Bulbs will not hold until late winter. 16-18". 16-17cm.

2391: 5 for $5.75 *2392: 10 for $9.50*

Growing Other Bulbs Indoors

Why not enjoy your favorite spring bulbs all winter long? With a little extra attention, you can grow many bulbs indoors. While paperwhites and amaryllis are ready to plant and grow, all other bulbs must be cooled for a time (forced) to fulfill their winter dormancy requirements before they will flower.

Planting: Choose a pot shallow and wide enough to hold several bulbs. Fill the pot halfway with stones or other coarse material, set the bulbs in root side down, then fill the container with fine stones, sand, light potting mix or other material until the bulbs are about two-thirds covered. The bulbs already contain all the nutrients needed to bloom once, and too rich a soil may cause them to rot. Water up to the base of the bulbs. Or use a hyacinth glass: Fill with water to the base of the bulb, and do not let it get dry.

Forcing: After watering, cover the pot with plastic, punch a few holes for circulation, and place in the fridge (this works well because the temperature is consistent, just be sure to keep the bulbs away from fruit). Or, place them in a garage, unheated basement, root cellar, outdoors covered with 6-8" of leaves and earth, or other dark place at 35-40°F. The bulbs will not be hurt by light frost but will be harmed by heat or a hard freeze.

Bulb	weeks in: cold storage	indirect light
Crocus	4-6	1-2
Galanthus, Scilla	6-7	1-2
Iris reticulata	7-8	1-2
Hyacinthus	10-12	2-3
Narcissus, Muscari	12-13	3-4
Tulipa	14-15	3-4

You can tell the bulbs are ready if you can see roots at the bottom of the pot, and leaf tips beginning to emerge. Bring the bulbs into a cool area (50-65°F) with plenty of indirect light to encourage leaf growth. Too much heat at this point will cause premature flowering; do not place near radiators or wood stoves. Keep the soil moist, but do not overwater.

When 3-5" of leaf growth has appeared, bring the pots into direct light to encourage flowering. Once blooms have appeared, remove pots from direct sun to keep colors from fading quickly.

Plant forced bulbs in the garden in spring, or let them go dormant in their pots and plant them in fall. They will not force well a second time. The bulbs may not blossom until the 2nd spring after they were planted outdoors.

Outdoor Bulbs

All the varieties of outdoor bulbs we offer are adapted to Maine's climate. Here in Waterville we are in USDA Zone 4. Fifty miles to the west in the mountains is Zone 3; fifty miles east on the coast is Zone 5. However, local cold pockets, northern slopes, hills and lakes can all affect your micro-climate, and may make the large-scale maps printed by the USDA inaccurate for your plot. Your cooperative extension service may have maps showing local zones. You can use rock walls and heavy mulch to shift conditions to your advantage.

Planning and Planting

Bulbs are easy to work with, very rewarding and forgiving. They look best planted in groups or clumps, naturalized in the sod, under trees, or in the rock garden, bed or border. Good drainage is essential; bulbs will grow poorly or rot if they are too wet.

Prepare beds by mixing a bulb fertilizer, bonemeal and wood ashes, or other phosphorus and potassium sources into the soil below the level of the bulbs. Mix in compost to lighten heavy soils and increase nutrients. Peat is acidic—use with caution. Although widely available, Holland Bulb Booster contains ingredients which are not approved for organic growers.

Plant bulbs pointed side up; generally the depth of the hole is three times the bulb's height. See the chart on this page showing suggested planting depth and spacing. Topdress the bed with compost. Planting small bulbs that produce fall foliage above narcissus and tulips helps mark where the large ones are for autumn dividing.

Mulch your bulbs with 4-6" of leaves, bark, straw, etc. after the ground freezes, especially if you plant them next to your house. Otherwise, basement heat and reflected sunlight will remove the insulating snow cover, exposing them to alternating sunny days and freezing nights and damaging their growth tips. Wherever they're planted, bulbs need insulation. You need to mulch unless you can depend on winter to provide a consistent snow cover heavy enough to last through a January thaw. A good mulch can also give protection up to half a hardiness zone, enabling you to experiment with bulbs not quite hardy in your zone.

Do not remove the mulch too early in the spring. By keeping the soil from thawing, mulch prevents heaving and false starts in early warm spells and delays flowering slightly for a more uniform and longer-lasting display. Remove mulch as the bulbs begin to peek through in the spring and dress the bed with compost.

Pinch the blooms as they fade to discourage seed production and force the energy back into the bulb. This is especially important for tulips and hyacinths, which otherwise lose their vigor in 2-3 years.

Do not cut the foliage as long as it remains green; it produces the food for future blooms. Cut leaves only after they yellow. Sidedress with fertilizer or compost in late summer to mid-fall.

If squirrels, chipmunks or moles are a problem, try chicken wire or sharp gravel placed in the ground surrounding the bulbs. (Blood meal repels many critters, but it may also repel people and attract dogs.) Or plant Narcissus, Allium, Fritillaria or Ipheion, which critters don't generally bother.

To disrupt squirrels' ability to "smell out" the bulbs in new plantings, we've begun dusting those areas with black pepper and ground cloves in the fall right after planting and again in the spring when growth first emerges. The odor in the yard, reminiscent of pumpkin pie, is a neat touch too.

If after several years your bulbs produce leaves but not flowers, they may be suffering from overcrowding (dig in fall, separate and replant), insufficient sun (move to new location), undernourishment (sidedress thoroughly) or marginal zone hardiness (give to a friend further south).

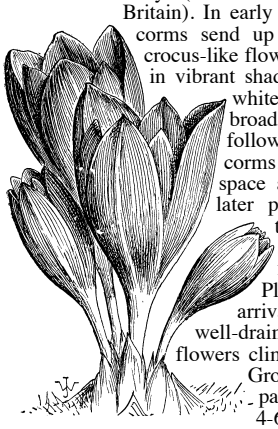
Early shipment of perennials and fall-blooming bulbs

We have been gradually expanding this section due to your response; this year we have added more daylilies. Only these "E" items on pp7-9 are available for early shipment. **Order early as the final ordering deadline for these items is Friday, August 14.**

Colchicum - Colloquially called Fall Crocus and in some locales Meadow Saffron (but don't try it, it's toxic. Real saffron offered below). Flowerstalks emerge months before the leaves, giving rise to the terms Naked Boys (in the U.S.) and Naked Girls (in Britain). In early fall, the large bulb-like corms send up cup- or goblet-shaped crocus-like flowers, up to five per stem, in vibrant shades of magenta, lilac or white. Handsome glossy and broad, the leaves emerge the following spring to feed the corms, stake out their own space and fill in spots where later perennials will appear, then die back by late summer to make way for fall's naked bloom. Plant bulbs *soon* after arrival 4" deep in fertile, well-drained soil or you may find flowers climbing out of your bags. Grows well in full sun or partial shade. Flowers 4-6", greens to 10"; Z4-9.



C. autumnale 'Album' - Vigorous white, a bit smaller than other varieties. 4-5", 13cm/up.

E1011: 1 for $4.75 *E1012: 3 for $12.00*
E1013: 6 for $23.00 *E1014: 12 for $42.00*

'The Giant' - Organic - Violet to rosy pink with a white base, a hybrid of *C. giganteum* x *C. bornmuelleri*. 3" petals open nearly flat in bright sun and will form a cheery carpet over time. Daylilies - *Hemerocallis* - We continue to expand our fall planted offerings of the famously familiar daylily clan. As Susan puts it, daylilies are "champion low-maintenance perennials [which] produce a bush of narrow arched leaves topped with lily-shaped flowers from July to September. Hemerocallis means beautiful day, referring to the fact that each flower lasts only a day, but since each scape (stem) is covered with buds, bloom periods can be extensive. Plant 12-18" apart in average soil; benefits from a shovel or two of compost. Very hardy, flourishes under a wide range of conditions, from full sun to shade, wet to dry." Ours are freshly dug U.S.-grown #1 tubers, three varieties from the Stella series and three other enticing beauties.

Hyacinths *Hyacinthus orientalis*

were more popular than either tulips or daffodils 130 years ago. An old Persian proverb says that if you have two loaves of bread, you should sell one to buy hyacinths. Their heady fragrance and range of color make them a favorite in the spring. The wafts of perfume from around the yard are wonderful—even passers-by notice the scent.

For best showing year after year, plant bulbs deep in rich well-drained soil in full sun and fertilize each fall. After the first year, the florets are slightly smaller and not as dense. Grow them in the border in close bunches or meandering drifts. Best to wear gloves because a natural compound in the bulbs can cause "hyacinth itch;" wash with cold water and plain soap after handling the bulbs. Z4-8, 8-12", ES. 16-17cm unless noted.

Hyacinth Glass - The hourglass shape holds the bulb securely, with plenty of room for roots. Colorless fine glass also makes a small cutflower vase in summer. 5¾" tall, 3½" diameter. See page 5 or other sources for forcing information.

Spring-flowering bulbs provide bees and other pollinators with an early food supply to replenish their hives and our lives.

Iris, Greek goddess of the Rainbow, lends her name to this large genus of beautiful flowers with a wide range of sizes and colors. Growing from bulbs or fleshy rhizomatous roots, perennial iris are superb for cutting and borders. Most prefer sun or dappled shade with moderately fertile well-drained soil. "Standards" are the three smaller erect petals; "falls" are the three larger pendant, reflexed or spreading petals. The "crest," "blotch" or "signal" is the blaze of contrasting color on the fall.

Bulbous Iris fall into three groups: Reticulata, with netted bulbs; Juno, with fleshy roots on the bulbs; and Xiphium, with papery-covered bulbs. All are dormant in summer.

See pages 7-8 for bearded iris and page 13 for Japanese and Siberian iris.

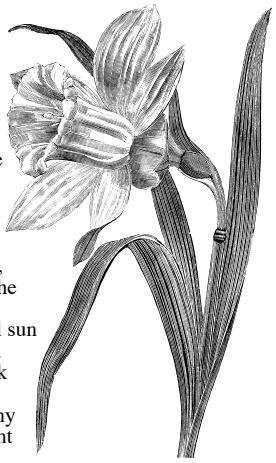
Narcissus



are known to many of us as daffodils. Botanically speaking, there are currently 12 divisions (differentiated by the morphology and number of flowers) of narcissus, with Division 1 being the true daffodils and Division 7 the jonquils. Distinguishing features include the flower's cup, also known as the crown, corona, or trumpet, and the perianth or petals.

Narcissus thrive in full sun as well as dappled shade. While most pink and dark varieties hold their color better in semi-shade, many white varieties need bright sun to mature their initial yellow or cream coloring to white. Pink and red varieties look best during cool wet springs.

The voracious deer will not eat narcissus, as they are toxic, witness the May 2009 episode that sent school-children in Martlesham Heath, Suffolk, England to the hospital; in cooking class, they inadvertently put one in the soup along with the onions from the school garden.

Wonderful for beds, borders, cutflowers, forcing, and naturalizing. They will return year after year as long as the soil is well drained and the foliage is not cut until it has completely died back. Water late varieties in mid spring during dry years to ensure bloom. Z3-8 (except where noted).

Topsize bulbs (the largest ordinarily available for each variety) except where noted otherwise. Landscape size bulbs are one size smaller and less expensive than topsize, for gardeners who plan their floral displays on the landscape scale. Exhibition size is even larger than topsize; designed for the spring flower exhibitions in Europe, the giant bulbs produce larger and more spectacular floral displays.

➢ **TRUMPET (DIV. 1)** - Cup longer than the perianth; one flower per stem. The classic Daffodil.

'Dutch Master' - Large yellow petals and scalloped yellow trumpet. A prolific and improved 'King Alfred', slightly taller, longer bloom time, and more flowers per bulb. 18-20", ES-MS.

Miscellaneous Bulbs

is the name the Royal General Bulbgrowers Association in Holland gives to this large group of flowers. The expensive catalogs call them specialty bulbs; some call them minor or dwarf bulbs (even though some of the allia are huge!); Louise Beebe Wilder covers most of them in her 1936 *Adventures with Hardy Bulbs*. Whatever you call them, most are uncommonly sweet, delicate, colorful, and completely welcome in the spring.

Allium - Flowering Onion **-** Large genus characterized by small florets held in large or small, loose or tight umbels. Sweet-smelling blooms make great fresh cutflowers or dried winter arrangements. Likes full sun and well-drained soil. Most repel pests, but only when crushed do they smell like onion.
Also see #**7411** Nectaroscordum on page 22.

➢ LOW-GROWING ALLIUMS 6-16".

A. cæruleum - **Blue of the Heavens** - Syn. *A. azureum*. Gorgeous flax blue florets form 1½" dense umbel. Hardy variety from Siberia gradually forms large clumps. Leaves die back before flowering begins. First 500 ordered will be Maine-grown bulbs! Z3-8, 12-16", LS-SU. 5-6cm.

Lilium - Lilies - Last year, after a 12-year hiatus, we began again to offer these Queens of the Perennial Border for fall planting. Excellent as bedding plants or cutflowers, lilies are wonderful as individual specimens or in solid masses. These true lilies bear their large six-pointed flowers on erect unbranched stems. They do well in light shade, which will prolong summer blooms, or in full sun if mulched to keep the bulbs cool. Since lily bulbs are not completely dormant when shipped, do not let them dry out before planting. Plant bulbs 6-8" deep, 6" apart in rich, well-drained slightly acid soil with good humus content. Z3-8, 36-48", 16/18cm.

Muscari - Grape Hyacinths - Distinctive steeply pyramidal spikes of fragrant long-lasting densely packed bells, like upside-down grape clusters. Makes attractive borders, edging, or brightly colored filler between other bulbs. They thrive and increase except in damp or shady areas. Divide when dormant in summer. Do not cut their autumn leaves. Take advantage of them by planting Muscari to mark other bulbs that need to be dug and divided in fall.

GardenTulips are wonderful massed or as accents, colorful highlights of spring. Most varieties are also good for cutting.

For many people, tulips are annuals to be removed and replaced yearly. Other gardeners dig their tulips in early summer after the foliage has died, ripen the bulbs in a cool dry place, and replant in fall—a time-consuming process which increases the probability of blooms the next year.

You can also take simpler steps to encourage your tulips to come back. Choose a sunny location and plant the bulbs 8-10" deep in well-drained soil, 3-4 weeks before the ground freezes. If you encounter heavy subsoil, plant the bulbs 4-6" deep and build up a bed on top. Tulips need 1/2-1" of rain during spring growth; water during drought. Overplant with annuals or perennials to keep the soil dry during the summer. Deadhead tulips regularly to force the plant's energy back into the bulb. Don't cut or tie the foliage until it has begun to yellow. Z3-7. Topsize bulbs, 12cm/up except where we specify Jumbo.

Long-Handled Naturalizing Tool Made in Ontario by M & K Machine, Ltd. 3x8" leaf-spring steel blade is beveled, sharpened and notched at the business-end, and welded to a shaft of 1"-steel pipe. A foot bar welded to the top of the blade provides the "persuasion" often necessary to bust into rough terrain. A 12" T-handle with plastic grips completes the ensemble. Lifetime professional tool weighs approximately 7 lbs and is 38" long overall. Step on the foot bar to sink the blade, push handle away from you an arm's length, pull the bar back far enough to open the hole. Place bulb in hole at proper depth, move 4-6" forward to next spot and repeat the process which will help close the previous hole.
